

Garage Management system

Project Description:

The Garage Management System is a valuable tool for automotive repair facilities, helping them deliver top-notch service, increase operational efficiency, and build lasting customer relationships. With its user-friendly interface and powerful features, GMS empowers garages to thrive in a competitive market while ensuring a seamless and satisfying experience for both customers and staff.

Project Flow:

In this project you can do hands on practice the configuration as well as customization with the Data modelling, App building, User Adoption & Apex Code

Milestone 1: Creation of developer account
Milestone 2: Object Creation
Milestone 3 : Tabs Creation
Milestone 4 : Create App
Milestone 5 : Fields & Relationships
Milestone 6 : Page Layout
Milestone 7 : Profile
Milestone 8 : Role and role hierarchy
Milestone 9 : Users
Milestone 10 : Permission set
Milestone 11 : User Adoption
Milestone 12 : Reports
Milestone 13 : Dashboards
Milestone 14 : Flows
Milestone 15 : Apex Classes and Triggers

What you'll learn

1. Real Time Salesforce Project
2. Object & Relationship in Salesforce
3. Formula fields and Validation rules.
4. Cross object formula fields.
5. Rollup summary fields.
6. Reports and dashboards
7. Conditional formatting.
8. Flows

Done by:

S.Rajesh (au711221104042)
S.Chandru (au711221104009)
M.S.Dharinendra (au711221104013)
M.Sanjay (au711221104045)

9. Email alerts and email templates

Milestone 1-Salesforce :

Introduction:

Are you new to Salesforce? Not sure exactly what it is, or how to use it? Don't know where you should start on your learning journey? If you've answered yes to any of these questions, then you're in the right place. This module is for you.

Welcome to Salesforce! Salesforce is game-changing technology, with a host of productivity-boosting features, that will help you sell smarter and faster. As you work toward your badge for this module, we'll take you through these features and answer the question, "What is Salesforce, anyway?"

What Is Salesforce?

Salesforce is your customer success platform, designed to help you sell, service, market, analyze, and connect with your customers.

Salesforce has everything you need to run your business from anywhere. Using standard products and features, you can manage relationships with prospects and customers, collaborate and engage with employees and partners, and store your data securely in the cloud.

So what does that really mean? Well, before Salesforce, your contacts, emails, follow-up tasks, and prospective deals might have been organized something like this:

<https://youtu.be/r9EX3lGde5k>

Activity 1: Creating Developer Account:

Creating a developer org in salesforce.

1. Go to <https://developer.salesforce.com/signup>
2. On the sign up form, enter the following details :

Build enterprise-quality apps fast to bring your ideas to life

- Build apps fast with drag and drop tools
- Customize your data model with clicks
- Go further with Apex code
- Integrate with anything using powerful APIs
- Stay protected with enterprise-grade security
- Customize UI with clicks or any leading-edge web framework

Sign up for your Salesforce Developer Edition
A full-featured copy of the Platform, for free

Complete the form to start your free trial. Our team will be in touch to help you make the most of your trial.

First Name*
Your first name

Last Name*
Your last name

Email*
Your email address

Role*
Your job role

Company*
Company Name

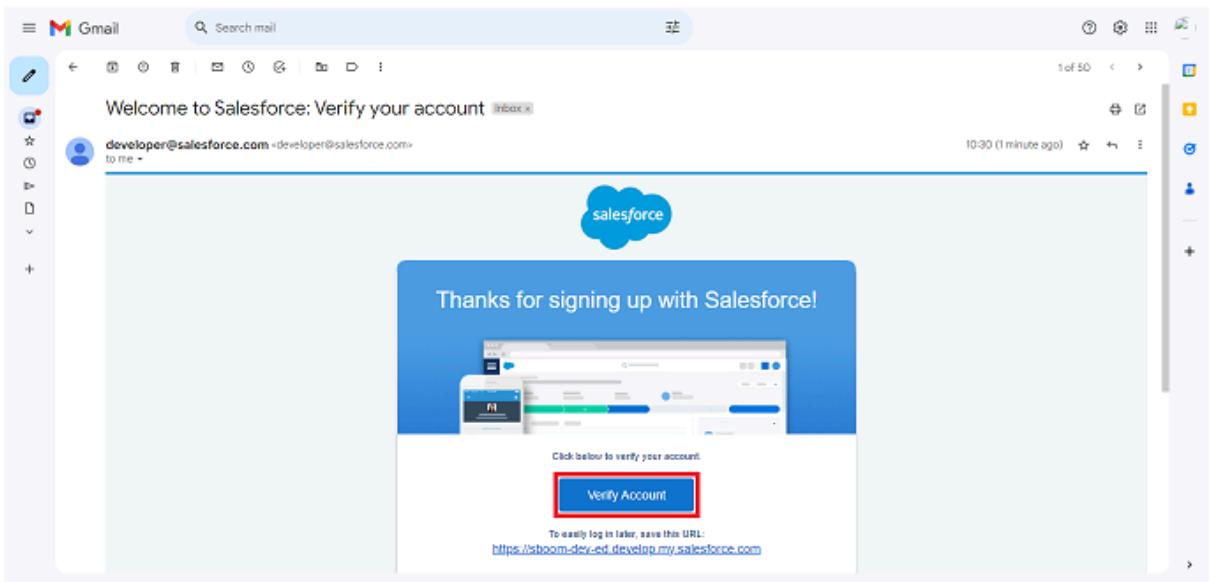

- 1) First name & Last name
- 2) Email
- 3) Role : Developer
- 4) Company : College Name
- 5) County : India
- 6) Postal Code : pin code
- 7) Username : should be a combination of your name and company

This need not be an actual email id, you can give anything in the format :
username@organization.com

Click on sign me up after filling these.

Activity 2: Account Activation:

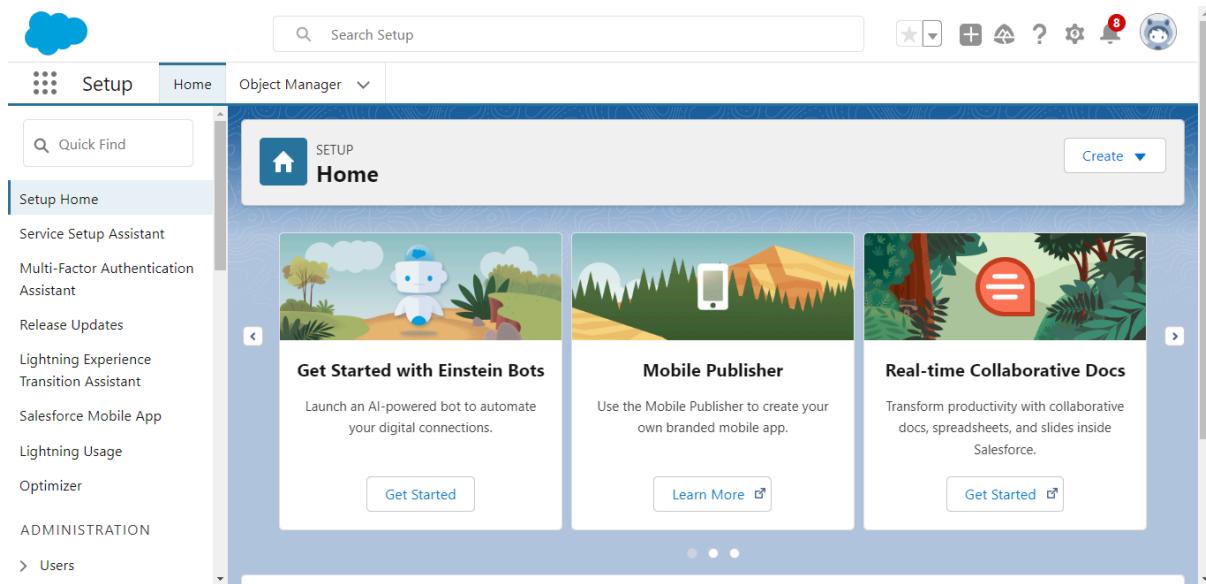

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

2. Click on Verify Account
3. Give a password and answer a security question and click on change password.

The screenshot shows the "Change Your Password" page. The title is "Change Your Password". A message at the top says "Enter a new password for lead@sb.oom." and "Make sure to include at least:" followed by three requirements: "8 characters", "1 letter", and "1 number". Below these requirements is a red-bordered box containing the password fields and the "Change Password" button. The "New Password" field contains "....." and is labeled "Good". The "Confirm New Password" field contains "....." and is labeled "Match". Below these fields is a "Security Question" section with a dropdown menu showing "In what city were you born?". Underneath is an "Answer" field containing "asdfghjkl". The bottom right button is "Change Password", which is also highlighted with a red border.

4. Then you will redirect to your salesforce setup page.

Milestone 2- Object

What Is an Object?

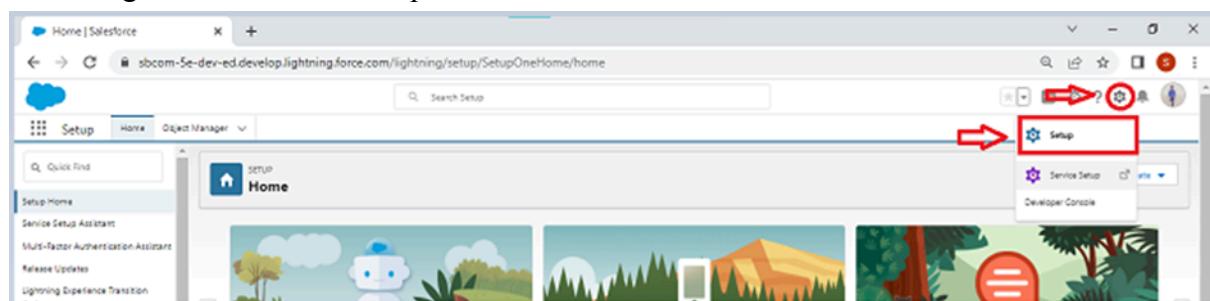

Salesforce objects are database tables that permit you to store data that is specific to an organization. What are the types of Salesforce objects

Salesforce objects are of two types:

1. **Standard Objects:** Standard objects are the kind of objects that are provided by salesforce.com such as users, contracts, reports, dashboards, etc.
2. **Custom Objects:** Custom objects are those objects that are created by users. They supply information that is unique and essential to their organization. They are the heart of any application and provide a structure for sharing data.

To Navigate to Setup page:

Click on gear icon → click setup.

To create an object:

- From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.

- On Custom object defining page:
- Enter the label name, plural label name, click on Allow reports, Allow search.

New Custom Object | Salesforce

Custom Object Definition Edit

Custom Object Information

The singular and plural labels are used in tabs, page layouts, and records.

Label: Example: Account

Plural Label: Example: Accounts

Object Name

Description

Contact Sensitive Help Setting

Content Name

- Click on Save.

- 8) Plural label name → Billing details and feedback
- 9) Enter Record Name Label and Format
 - Record Name → Billing details and feedback Name
 - Data Type → Auto Number
 - Display Format → bill-{000}
 - Starting number → 1
8. Click on Allow reports and Track Field History,
9. Allow search → **Save.**

Milestone 3- Tabs

What is Tab : A tab is like a user interface that is used to build records for objects and to view the records in the objects.

Types of Tabs:

1. Custom Tabs

Custom object tabs are the user interface for custom applications that you build in salesforce.com. They look and behave like standard salesforce.com tabs such as accounts, contacts, and opportunities.

2. Web Tabs

Web Tabs are custom tabs that display web content or applications embedded in the salesforce.com window. Web tabs make it easier for your users to quickly access content and applications they frequently use without leaving the salesforce.com application.

3. Visualforce Tabs

Visualforce Tabs are custom tabs that display a Visualforce page. Visualforce tabs look and behave like standard salesforce.com tabs such as accounts, contacts, and opportunities.

4. Lightning Component Tabs

Lightning Component tabs allow you to add Lightning components to the navigation menu in Lightning Experience and the mobile app.

5. Lightning Page Tabs

Lightning Page Tabs let you add Lightning Pages to the mobile app navigation menu.

Lightning Page tabs don't work like other custom tabs. Once created, they don't show up on the All Tabs page when you click the Plus icon that appears to the right of your current tabs. Lightning Page tabs also don't show up in the Available Tabs list when you customise the tabs for your apps.

Activity 1: Creating a Custom Tab

To create a Tab:(Customer Details)

1. Go to setup page → type Tabs in Quick Find bar → click on tabs → New (under custom object tab)

The screenshot shows the Salesforce Setup interface with the 'Custom Tabs' page open. The 'Custom Object Tabs' section lists various custom objects with their tab styles and descriptions. A red box highlights the 'Customer Details' object, and a red arrow points to the 'Create New' button at the top right of the list.

2. Select Object(Customer Details) → Select the tab style → Next (Add to profiles page) keep it as default → Next (Add to Custom App) uncheck the include tab .
3. Make sure that the Append tab to users' existing personal customizations is checked.
4. Click save.

New Custom Object Tab

Step 1. Enter the Details Step 1 of 3

Choose the custom object for this new custom tab. Fill in other details.

Select an existing custom object or [create a new custom object now](#).

Object	Customer Details
Tab Style	Deck

(Optional) Choose a Home Page Custom Link to show as a splash page the first time your users click on this tab.

Splash Page Custom Link	—None—
-------------------------	--------

Enter a short description.

Description	[Empty Text Area]
-------------	-------------------

Next Cancel

Activity 2: Creating Remaining Tabs

1. Now create the Tabs for the remaining Objects, they are “ Appointments, Service records,Billing details and feedback”.
2. Follow the same steps as mentioned in Activity -1 .

Milestone 4- The Lightning App:

An app is a collection of items that work together to serve a particular function. In Lightning Experience, Lightning apps give your users access to sets of objects, tabs, and other items all in one convenient bundle in the navigation bar.

Lightning apps let you brand your apps with a custom colour and logo. You can even include a utility bar and Lightning page tabs in your Lightning app. Members of your org can work more efficiently by easily switching between apps.

Activity 1: Create a Lightning App

To create a lightning app page:

1. Go to setup page → search “app manager” in quick find → select “app manager” → click on New lightning App.

The screenshot shows the Salesforce App Manager interface. At the top, there's a search bar with 'Search Setup' and a 'New Lightning App' button. Below the search bar, there are three main sections: 'App Manager' (with a red box around it), 'Lightning Experience App Manager' (with a red box around it), and 'Clone Apps(Beta)' (with a red box around it). A large red arrow points from the 'New Lightning App' button down to the list of existing apps below. The list is titled '35 Items • Sorted by App Name • Filtered by All appmemberships • No Set Type'. It contains 10 entries, each with columns for 'App Name', 'Developer Name', 'Description', 'Last Modified', 'App Type', and 'VU'. The entries include 'All Tabs', 'Analytics Studio', 'App Launcher', 'Bolt Solutions', 'Chatter Desktop', 'Chatter Mobile for BlackBerry', 'College Management System', 'Community', 'Content', and 'Data Manager'. The 'App Type' column shows a mix of 'Classic' and 'Lightning' types.

App Name	Developer Name	Description	Last Modified	App Type
All Tabs	AltTabSet		04/12/2022, 10:13 am	Classic
Analytics Studio	Insights	Build CRM Analytics dashboards and apps	04/12/2022, 10:13 am	Classic
App Launcher	AppLauncher	App Launcher tabs	04/12/2022, 10:13 am	Classic
Bolt Solutions	Lightningbolt	Discover and manage business solutions designed for your industry	04/12/2022, 10:18 am	Lightning
Chatter Desktop	Chatter/Desktop	Chatter Desktop is an Adobe AIR-based desktop application that lets Chatter users stay connected...	28/12/2022, 4:04 pm	Connected (Managed)
Chatter Mobile for BlackBerry	ChatterForBlackBerry	The Salesforce.com Chatter Mobile app lets you access Chatter data on the go. Use it to view feed...	28/12/2022, 4:05 pm	Connected (Managed)
College Management System	Nadeem	demo app	08/12/2022, 4:18 pm	Lightning
Community	Community	Salesforce CRM Communities	04/12/2022, 10:13 am	Classic
Content	Content	Salesforce CRM Content	04/12/2022, 10:13 am	Classic
Data Manager	DataManager	Use Data Manager to view limits, monitor usage, and manage recipes	04/12/2022, 10:13 am	Lightning

2. Fill the app name in app details as **Garage Management Application** → Next → (App option page) keep it as default → Next → (Utility Items) keep it as default → Next.

New Lightning App

App Details & Branding

Give your Lightning app a name and description. Upload an image and choose the highlight color for its navigation bar.

App Details	App Branding
App Name <input type="text" value="Name your app..."/>	Image <input type="button" value="Upload"/> Primary Color Hex Value <input type="color" value="#0070D2"/> #0070D2
Developer Name <input type="text" value="Enter a developer name..."/>	Org Theme Options <input type="checkbox"/> Use the app's image and color instead of the org's custom theme
Description <input type="text" value="Enter a description..."/>	

App Launcher Preview

Next

3. To Add Navigation Items:

New Lightning App

Navigation Items

Choose the items to include in the app, and arrange the order in which they appear. Users can personalize the navigation to add or move items, but users can't remove or rename the items that you add. Some navigation items are available only for phone or only for desktop. These items are dropped from the navigation bar when the app is viewed in a format that the item doesn't support.

Available Items	Selected Items
<input type="text" value="Type to filter list..."/> Accounts Activities Alert Settings All Sites Alternative Payment Methods App Launcher Appointment Invitations	No items selected

Back Next

Select the items (Customer Details, Appointments, Service records, Billing details and feedback, Reports and Dashboards) from the search bar and move it using the arrow button → Next.

4. To Add User Profiles:

New Lightning App

User Profiles

Choose the user profiles that can access this app.

Available Profiles	Selected Profiles
<input type="text" value="Type to filter list..."/> Analytics Cloud Integration User Analytics Cloud Security User Authenticated Website Authenticated Website Contract Manager Cross Org Data Proxy User Custom: Sales Profile	No Profiles selected

Back Save & Finish

Search profiles (System administrator) in the search bar → click on the arrow button → save & finish.

Milestone 5 : Fields

When we talk about Salesforce, Fields represent the data stored in the columns of a relational database. It can also hold any valuable information that you require for a specific object. Hence, the overall searching, deletion, and editing of the records become simpler and quicker.

Types of Fields

1. Standard Fields
2. Custom Fields

Standard Fields:

As the name suggests, the Standard Fields are the predefined fields in Salesforce that perform a standard task. The main point is that you can't simply delete a Standard Field until it is a non-required standard field. Otherwise, users have the option to delete them at any point from the application freely. Moreover, we have some fields that you will find common in every Salesforce application. They are,

- Created By
- Owner
- Last Modified
- Field Made During object Creation

Custom Fields:

On the other side of the coin, Custom Fields are highly flexible, and users can change them according to requirements. Moreover, each organiser or company can use them if necessary. It means you need not always include them in the records, unlike Standard fields. Hence, the final decision depends on the user, and he can add/remove Custom Fields of any given form.

Activity 1: Creation of fields for the Customer Details object

1. To create fields in an object:

1. Go to setup → click on Object Manager → type object name(Customer Details) in search bar → click on the object.

The screenshot shows the Salesforce Object Manager interface. At the top, there's a search bar with 'cus' and buttons for 'Schema Builder' and 'Create'. Below the header, a table lists objects: 'Customer' (Standard Object) and 'Customer Details' (Custom Object). The 'Customer Details' row is highlighted with a red border.

LABEL	API NAME	TYPE	DESCRIPTION	LAST MODIFIED	DEPLOYED
Customer	Customer	Standard Object			
Customer Details	Customer_Details__c	Custom Object		05/10/2023	✓

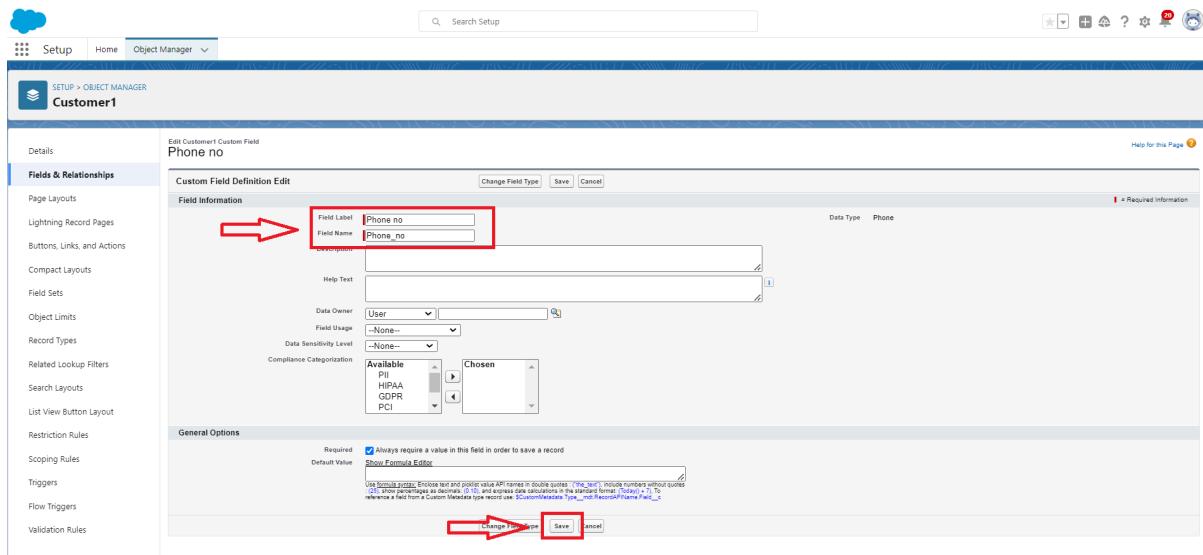

2. Now click on “Fields & Relationships” → New

The screenshot shows the 'Fields & Relationships' page for the 'Customer' object. The left sidebar has 'Fields & Relationships' selected. The main area shows a table of existing fields like 'Created By' and 'Email id'. A red box highlights the 'New' button at the top right of the table, and a red arrow points to it.

3. Select Data Type as a “Phone”

The screenshot shows the 'Fields & Relationships' page for the 'Customer' object. The left sidebar has 'Fields & Relationships' selected. The main area shows a list of field types: Currency, Date, Date/Time, Email, Geolocation, Number, Percent, and Phone. A red box highlights the 'Phone' option, and a red arrow points to its description: 'Allows users to enter any phone number. Automatically formats it as a phone number.'

4. Click on next.

5. Fill the Above as following:

- Field Label: Phone number
- Field Name : gets auto generated
- Click on Next → Next → Save and new.

Note: Follow the above steps for the remaining field for the same object.

2. To create another fields in an object:

1. Go to setup → click on Object Manager → type object name(Customer Details) in search bar → click on the object.
2. Now click on “Fields & Relationships” → New
3. Select Data type as a “Email” and Click on Next
4. Fill the Above as following:
 - Field Label : Gmail
 - Field Name : gets auto generated
 - Click on Next → Next → Save and new.

Activity 2 : Creation of Lookup Fields:

Creation of Lookup Field on Appointment Object :

1. Go to setup → click on Object Manager → type object name(Appointment) in the search bar → click on the object.

Object Manager					
LABEL	API NAME	TYPE	DESCRIPTION	LAST MODIFIED	DEPLOYED
Appointment	Appointment__c	Custom Object		24/08/2023	✓
Appointment Category	AppointmentCategory	Standard Object			
Appointment Invitation	AppointmentInvitation	Standard Object			
Appointment Invitee	AppointmentInvitee	Standard Object			

2. Now click on “Fields & Relationships” → New

3. Select “Look-up relationship” as data type and click Next.

Specify the type of information that the custom field will contain.

Data Type

- None Selected
- Auto Number
- Formula
- Roll-Up Summary
- Look-up Relationship
- Master-Detail Relationship

Creates a relationship that links this object to another object. The relationship field allows users to click on a lookup icon to select a value from a popup list. The other object is the source of the values in the list.

Creates a special type of parent-child relationship between this object (the child, or "detail") and another object (the parent, or "master") where:

- The relationship field is required on all detail records.
- The ownership and sharing of a detail record are determined by the master record.

4. Select the related object “Customer Details” and click next.

5. Next → Next → Save.

Note: Make sure you complete Activity 4 Before continuing.

Creation of Lookup Field on Service records Object :

1. Go to setup → click on Object Manager → type object name(**Service records**) in search bar → click on the object.
2. Now click on “Fields & Relationships” → New
3. Select “Look-up relationship” as data type and click Next.
4. Select the related object “ Appointment ” and click next.
5. Make it a required field so click on Required.

Related To: Appointment

Child Relationship Name: Service_records

Related List Label: Service records

Required: Always require a value in this field in order to save a record

What to do if the lookup record is deleted?

- Clear the value of this field. You can't choose this option if you make this field required.
- Don't allow deletion of the lookup record that's part of a lookup relationship.

6. Scroll down for Lookup Filter and click on Show filter settings.
7. Now add the filter criteria.
8. Field : Appointment: Appointment Date → Operator : less than →select field → Appointment: Created Date

 Currency

Specify the type of information that the custom field will contain.

Select one of the data types below.

A system-generated sequence number that uses a display format you define. The number is automatically incremented for each new record.

A read-only field that derives its value from a formula expression you define. The formula field is updated when any of the source fields change.

A read-only field that displays the sum, minimum, or maximum value of a field in a related list or the record count of all records listed in a related list.

Creates a relationship that links this object to another object. The relationship field allows users to click on a lookup icon to select a value from a popup list. The other object is the source of the values in the list.

Creates a special type of parent-child relationship between this object (the child, or "detail") and another object (the parent, or "master") where:

- The relationship field is required on all detail records.
- The ownership and sharing of a detail record are determined by the master record.
- When a user deletes the master record, all detail records are deleted.
- You can create rollup summary fields on the master record to summarize the detail records.

The relationship field allows users to click on a lookup icon to select a value from a popup list. The master object is the source of the values in the list.

Creates a relationship that links this object to an external object whose data is stored outside the Salesforce org.

Allows users to select a True (checked) or False (unchecked) value.

Allows users to enter a dollar or other currency amount and automatically formats the field as a currency amount. This can be useful if you export data to Excel or another application.

4. Give the Field Label : Maintenance service
5. Field Name : is auto populated
6. Default value : unchecked

8. Click on next → save.

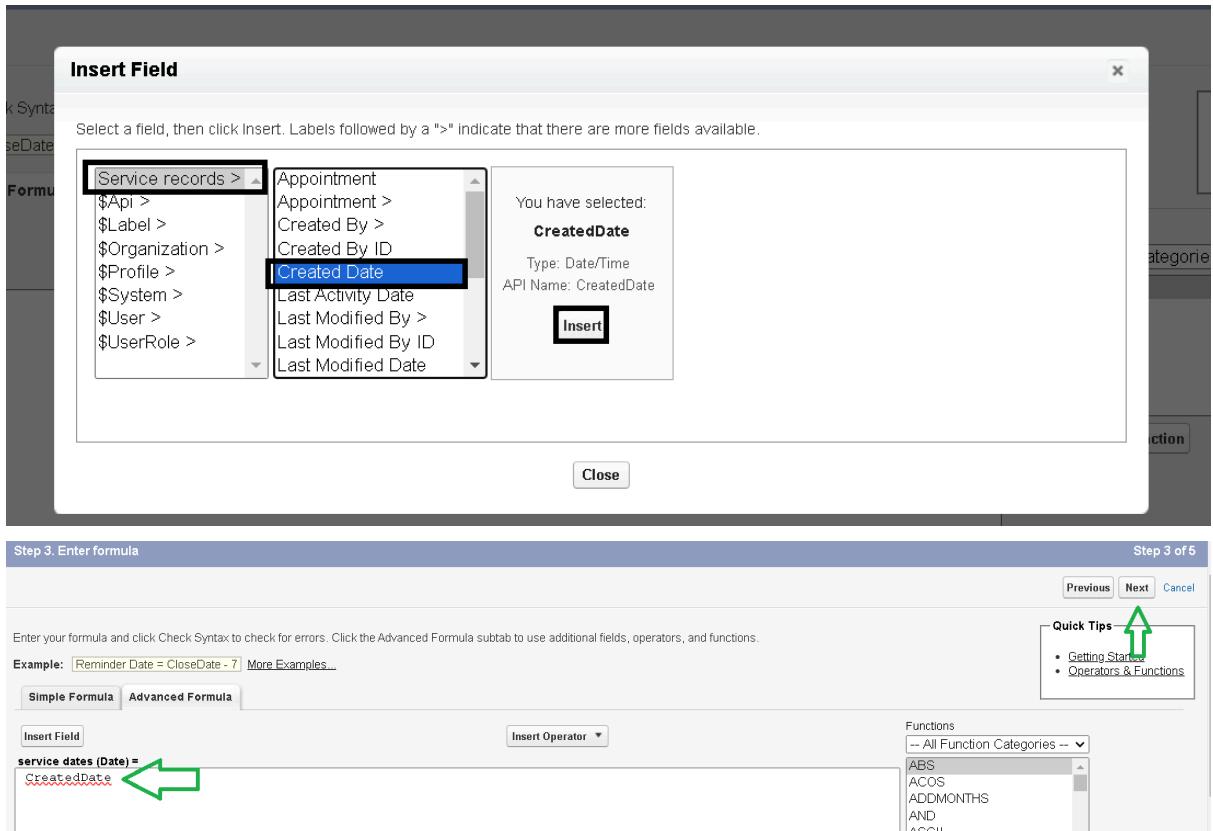

Creation of Currency Field on Billing details and feedback Object :

1. Follow the same steps as mentioned above in **Billing details and feedback Object**.
2. Change the label name as mentioned.
3. Give the Field Label : Payment Paid
4. Field Nme : is auto populated

Activity 6 : Creation of Text Fields:

1. Go to setup → click on Object Manager → type object name(**Appointment**) in the search bar → click on the object.
2. Now click on “Fields & Relationships” → New.
3. Select “Text” as data type and click Next.

5. Insert field formula should be : CreatedDate

6. click “Check Syntax” .
7. Click next → next → Save.

Milestone 6: Validation rule

Validation rules are applied when a user tries to save a record and are used to check if the data meets specified criteria. If the criteria are not met, the validation rule triggers an error message and prevents the user from saving the record until the issues are resolved.

Activity 1: To create a validation rule to an Appointment Object

1. Go to the setup page → click on object manager → From drop down click edit for **Appointment** object.
2. Click on the validation rule → click New.

SETUP > OBJECT MANAGER
Appointment

Activity 2: To create a validation rule to an Billing details and feedback Object

1. Go to the setup page → click on object manager → From drop down click edit for **Billing details and feedback** object.
2. Click on the validation rule → click New.
3. Enter the Rule name as “ rating_should_be_less_than_5”.
4. Insert the Error Condition Formula as :-
NOT(REGEX(Rating_for_service__c , "[1-5]{1}"))

The screenshot shows the 'Validation Rule Edit' interface. At the top, there are buttons for Save, Save & New, and Cancel. Below that, the 'Rule Name' field contains 'rating_should_be_less_than_5' with a red box around it. The 'Active' checkbox is checked. The 'Description' field is empty. On the right, a 'Quick Tips' panel has a link to 'Operators & Functions'. At the bottom, the 'Error Condition Formula' field contains the formula 'NOT(REGEX(Rating_for_service__c , "[1-5]{1}"))' with a red box around it. A note at the bottom right indicates that a red square icon means 'Required Information'.

5. Enter the Error Message as “rating should be from 1 to 5”, select the Error location as Field and select the field as “Rating for Service”, and click Save.

The screenshot shows the 'Validation Rule Edit' interface. The 'Error Condition Formula' field contains 'NOT(REGEX(Rating_for_service__c , "[1-5]{1}"))' with a red box around it. A dropdown menu is open over the formula, showing various functions like ACOS, ADDMONTHS, AND, ASCII, ASIN, etc., with 'Insert Selected Function' highlighted. Below the formula, the 'Error Message' field contains 'rating should be from 1 to 5' with a red box around it. An example message 'Discount percent cannot exceed 30%' is shown above the error message field. A note at the bottom right says 'This error message can either appear at the top of the page or below a specific field on the page'.

Milestone 7: Duplicate rule

Activity 1: To create a matching rule to an Customer details Object

1. Go to quick find box in setup and search for **matching Rule**.
2. Click on matching rule → click on New Rule.

Milestone 8 : Profiles

A profile is a group/collection of settings and permissions that define what a user can do in salesforce. Profile controls “Object permissions, Field permissions, User permissions, Tab settings, App settings, Apex class access, Visualforce page access, Page layouts, Record Types, Login hours & Login IP ranges. You can define profiles by the user's job function. For example System Administrator, Developer, Sales Representative.

Types of profiles in salesforce

1. Standard profiles:

By default salesforce provides below standard profiles.

- Contract Manager
- Read Only
- Marketing User
- Solutions Manager
- Standard User
- System Administrator.

We cannot deleted standard ones

Each of these standard ones includes a default set of permissions for all of the standard objects available on the platform.

2. Custom Profiles:

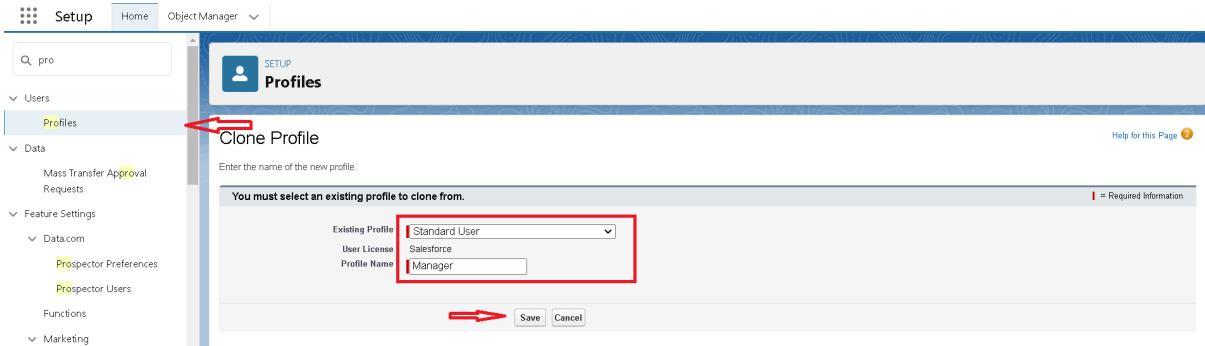

Custom ones defined by us.

They can be deleted if there are no users assigned with that particular one.

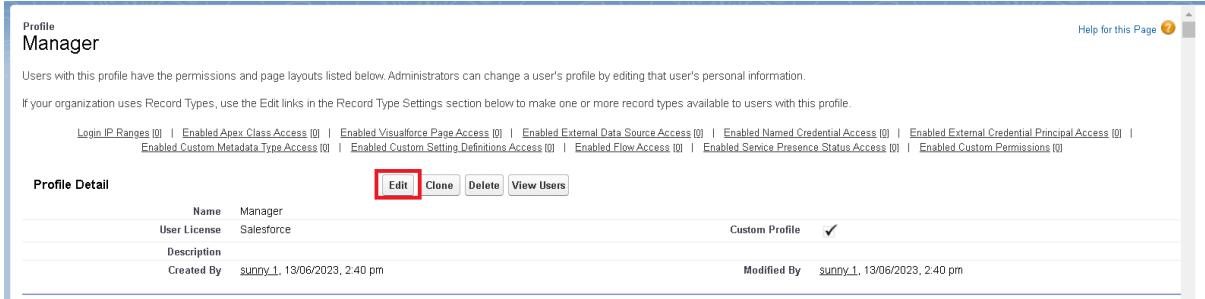

Activity 1: Manager Profile

To create a new profile:

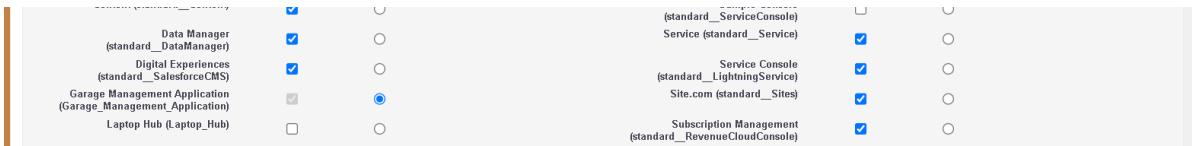

1. Go to setup → type profiles in quick find box → click on profiles → clone the desired profile (Standard User) → enter profile name (Manager) → Save.

2. While still on the profile page, then click Edit.

3. Select the Custom App settings as default for the Garage management.

4. Scroll down to Custom Object Permissions and Give access permissions for Appointments,Billing details and feedback , service records and customer details objects as mentioned in the below diagram.

Custom Object Permissions												
	Basic Access					Data Administration						
	Read	Create	Edit	Delete	View All	Modify All	Read	Create	Edit	Delete	View All	Modify All
Appointments	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Laptops	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Billing details and feedback	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Service records	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Customer Details	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	SessionData	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Environments	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>						

5. Changing the session times out after should be “ 8 hours of inactivity”.

6. Change the password policies as mentioned :

7. User passwords expire in should be “ never expires ”.

8. Minimum password length should be “ 8 ”, and click save.

Activity 2: sales person Profile

1. Go to setup → type profiles in quick find box → click on profiles → clone the desired profile (Salesforce Platform User) → enter profile name (sales person) → Save.
2. While still on the profile page, then click Edit.
3. Select the Custom App settings as default for the GArage management.
4. Scroll down to Custom Object Permissions and Give access permissions for Appointments,Billing details and feedback , service records and customer details objects as mentioned in the below diagram.

Custom Object Permissions												
	Basic Access						Data Administration					
	Read	Create	Edit	Delete	View All	Modify All	Read	Create	Edit	Delete	View All	Modify All
Appointments	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Laptops		<input type="checkbox"/> <input checked="" type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>							
Billing details and feedback	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Service records		<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>							
Customer Details	<input checked="" type="checkbox"/>	<input type="checkbox"/>	SessionData		<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>							
Environments	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>						

5. And click save.

Milestone 9 : Role & Role Hierarchy

A role in Salesforce defines a user's visibility access at the record level. Roles may be used to specify the types of access that people in your Salesforce organization can have to data. Simply put, it describes what a user could see within the Salesforce organization.

Activity 1: Creating Manager Role

Creating Manager Role:

1. Go to quick find → Search for Roles → click on set up roles.

2. Click on Expand All and click on add role under whom this role works.

3. Give Label as “Manager” and Role name gets auto populated. Then click on Save.

Role Edit

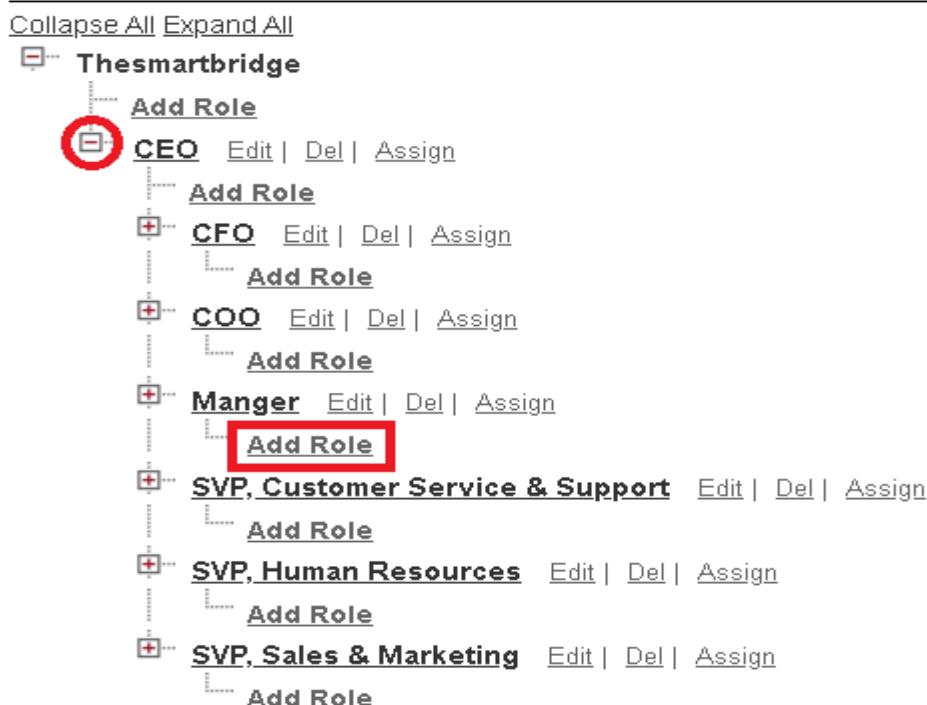

Label	Manger	
Role Name	Manger	
This role reports to	CEO	
Role Name as displayed on reports		

Save Save & New Cancel

Activity 2: Creating another roles

Creating another two roles under manager

1. Go to quick find → Search for Roles → click on set up roles.
2. Click plus on CEO role, and click add role under manager.

3. Give Label as “sales person” and Role name gets auto populated. Then click on Save.

Milestone 10 : Users

A user is anyone who logs in to Salesforce. Users are employees at your company, such as sales reps, managers, and IT specialists, who need access to the company's records. Every user in Salesforce has a user account. The user account identifies the user, and the user account settings determine what features and records the user can access.

Activity 1: Creating New Public Group

1. Go to setup → type users in quick find box → select public groups→ click New.

The screenshot shows the Salesforce Setup interface under 'Public Groups'. A search bar at the top contains 'public groups'. Below it, a sidebar has 'Users' selected. The main area is titled 'Public Groups' with a sub-header: 'A public group is a set of users. It can contain individual users, other groups, the users in a particular role or territory, or the users in a role or territory plus all of the users below that role or territory in the hierarchy.' There are buttons for 'View: All' (selected), 'Edit', and 'Create New View'. A navigation bar at the bottom includes letters from A to Z and an 'All' button. A message at the bottom says ' Didn't find what you're looking for? Try using Global Search.'

2. Give the Label as “sales team”.
3. Group name is autopopulated.
4. Search for Roles.
5. In Available Members select Sales person and click on add it will be moved to selected member.
6. Click on save.

The screenshot shows the 'New Public Group' dialog box. At the top are 'Save' and 'Cancel' buttons. The 'Label' field is filled with 'Sales Team'. The 'Group Name' field is filled with 'Sales_Team'. The 'Grant Access Using Hierarchies' checkbox is checked. Below these are 'Available Members' and 'Selected Members' lists. The 'Available Members' list contains roles like Customer Support, Director, Manager, Marketing Team, etc. The 'Selected Members' list contains 'Role: Sales person'. At the bottom are 'Add' and 'Remove' buttons, and a link 'Add to Delegated Administration Groups'.

Milestone 12: Sharing Setting

Salesforce allows you to configure sharing settings to control how records are accessed and shared within your organization. These settings are crucial for maintaining data security and privacy. Salesforce provides a variety of tools and mechanisms to define and enforce sharing rules, such as:

Organization-Wide Default (OWD) Settings:

These settings define the default level of access for all objects within your Salesforce org.

Sharing Settings

Work Plan Template	Private	Private	<input checked="" type="checkbox"/>
Work Step Template	Private	Private	<input checked="" type="checkbox"/>
Work Type	Private	Private	<input checked="" type="checkbox"/>
Work Type Group	Public Read/Write	Private	<input checked="" type="checkbox"/>
Appointment	Public Read/Write	Private	<input checked="" type="checkbox"/>
Billing details and feedback	Public Read/Write	Private	<input checked="" type="checkbox"/>
Customer Details	Public Read/Write	Private	<input checked="" type="checkbox"/>
Environment	Public Read/Write	Private	<input checked="" type="checkbox"/>
Laptop	Public Read/Write	Private	<input checked="" type="checkbox"/>
Service records	Private	Private	<input checked="" type="checkbox"/>
SessionData	Public Read/Write	Private	<input checked="" type="checkbox"/>

User Visibility Settings

Portal User Visibility	<input type="checkbox"/>
Site User Visibility	<input type="checkbox"/>

Other Settings

Standard Report Visibility	<input checked="" type="checkbox"/>
Manual User Record Sharing	<input type="checkbox"/>
Manager Groups	<input type="checkbox"/>
Minimize the number of roles created, which improves performance by cutting down processing loads <input checked="" type="checkbox"/>	
Grant site users access to related cases	<input checked="" type="checkbox"/>
Secure guest user record access	<input checked="" type="checkbox"/>
Require permission to view record names in lookup fields	<input type="checkbox"/>

Buttons: Save (highlighted with a red box), Cancel

3. Click on save and refresh.
4. Scroll down a bit, Click new on Service records sharing Rules.
- 5.

Service records Sharing Rules

(Red arrow points to the "New" button)

New Recalculate Service records Sharing Rules Help ?

No sharing rules specified.

6. Give the Label name as “ Sharing setting”
7. Rule name is auto populated.
8. In step 3 : Select which records to be shared, members of “ Roles ” >> “ Sales person”
9. In step 4: share with, select “ Roles ” >> “ Manager ”
10. In step 5 : Change the access level to “ Read / write ”.
11. Click on save.

Sharing Settings

You can use sharing rules only to grant wider access to data, not to restrict access.

Step 1: Rule Name

Label	sharing settings	(Red arrow points to the "sharing settings" input field)
Rule Name	sharing_settings	<input type="checkbox"/>
Description	<input type="text"/>	

Step 2: Select your rule type

Rule Type Based on record owner Based on criteria

Step 3: Select which records to be shared

Service records: owned by members of Roles (Red arrow points to the "Sales person" dropdown)

Step 4: Select the users to share with

Share with Roles (Red arrow points to the "Manager" dropdown)

Step 5: Select the level of access for the users

Access Level Read/Write (Red arrow points to the "Read/Write" dropdown)

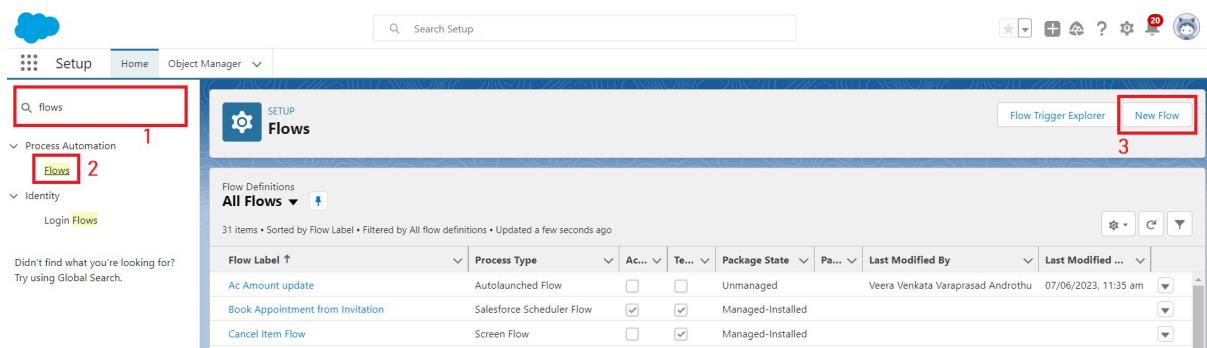

Buttons: Save (highlighted with a red box), Cancel

Milestone 13: Flows

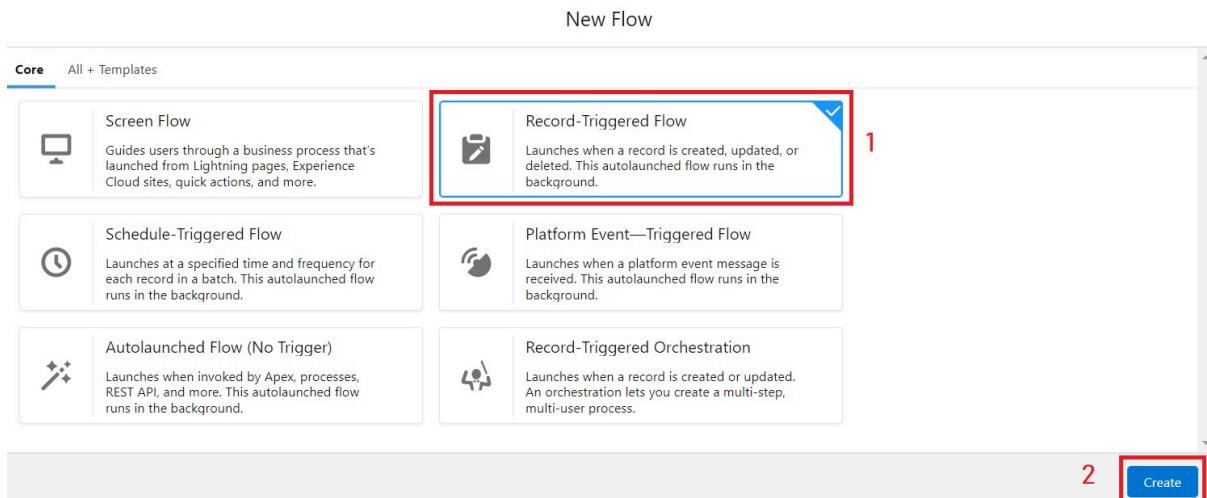

In Salesforce, a flow is a powerful tool that allows you to automate business processes, collect and update data, and guide users through a series of screens or steps. Flows are built using a visual interface and can be created without any coding knowledge.

Activity 1: Create a Flow

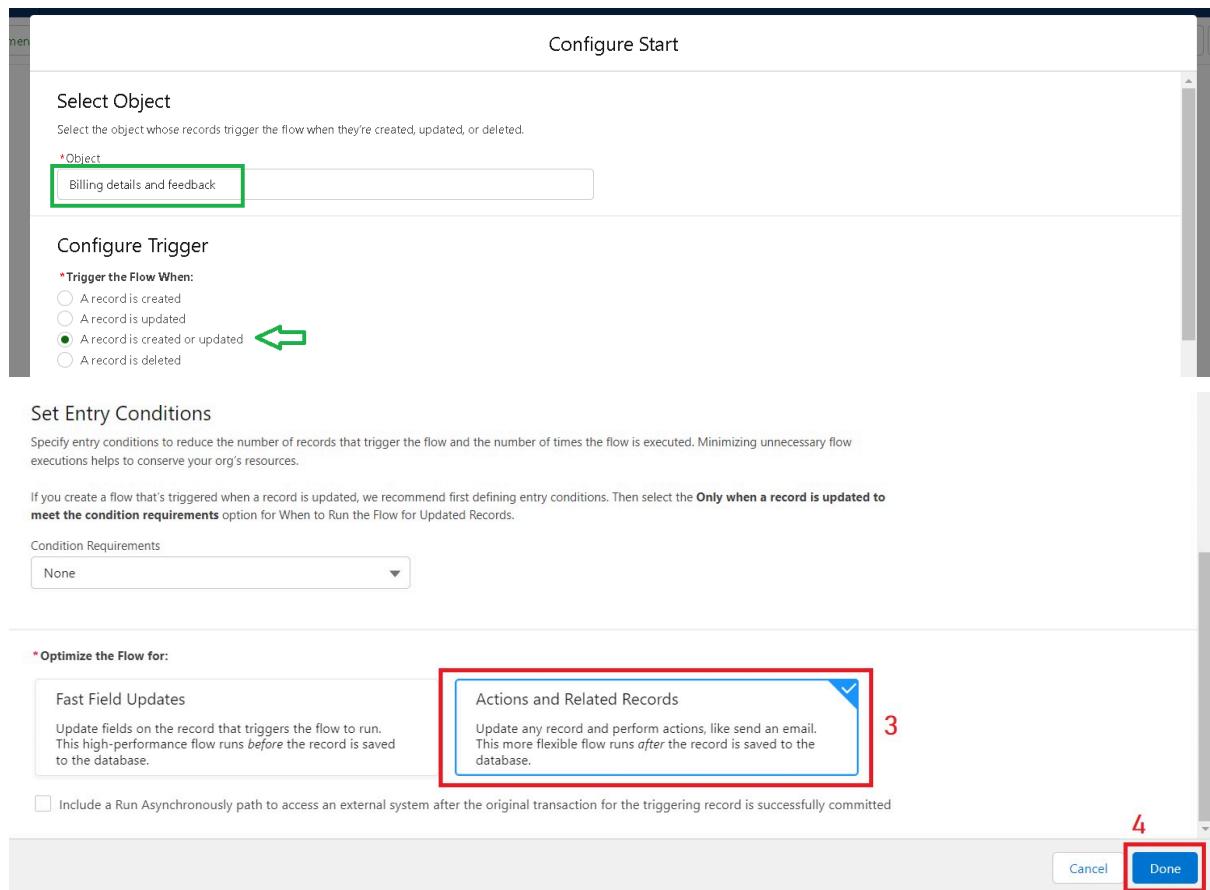

1. Go to setup → type Flow in quick find box → Click on the Flow and Select the New Flow.

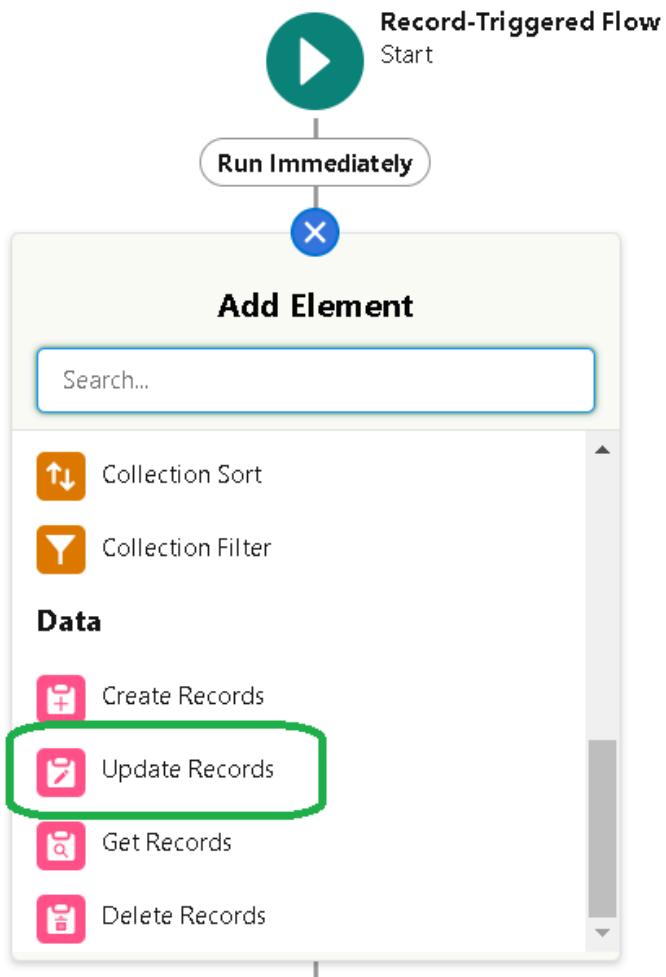

2. Select the Record-triggered flow and Click on Create.

3. Select the Object as “Billing details and feedback” in the Drop down list.
4. Select the Trigger Flow when: “A record is Created or Updated”.
5. Select the Optimize the flow for: “Actions and Related Records” and Click on Done.

6. Under the Record-triggered Flow Click on “+” Symbol and In the Drop down List select the “Update records Element”.

7. Give the Label Name : Amount Update
8. Api name : is auto populated

Edit Update Records

Update Salesforce records using values from the flow.

*Label	*API Name
Amount Update	Amount_Update
Description	
<input type="text"/>	

***How to Find Records to Update and Set Their Values**

- Use the billing details and feedback record that triggered the flow
- Update records related to the billing details and feedback record that triggered the flow
- Use the IDs and all field values from a record or record collection
- Specify conditions to identify records, and set fields individually

Set Filter Conditions

Condition Requirements to Update Record

All Conditions Are Met (AND)

Cancel Done

Set Filter Conditions

Condition Requirements to Update Record

All Conditions Are Met (AND)

Field	Operator	Value
Payment_Status__c	Equals	Completed

+ Add Condition

Set Field Values for the Billing details and feedback Record

Field	Value
Payment_Paid__c	\$Record > Service records > Appointment > Service A...

+ Add Field

Cancel Done

9. Set a filter condition : All Conditions are met(AND)
10. Field : Payment_Status__c
11. Operator : Equals
12. Value : Completed
13. And Set Field Values for the Billing details and feedback Record
14. Field : Payment_Paid__c
15. Value : {\$Record.Service_records__r.Appointment__r.Service_Amount__c}
16. Click On Done.

Edit Action

Use values from earlier in the flow to set the inputs for the "Send Email" core action. To use its outputs later in the flow, store them in variables.

*Label	*API Name
Email Alert	Email_Alert
Description	
<pre>{!alert}</pre>	

Set Input Values for the Selected Action

A_a Body	<input checked="" type="checkbox"/> Include
{!alert}	
A_a Email Template ID	<input type="checkbox"/> Don't Include
A_a Log Email on Send	<input type="checkbox"/> Don't Include

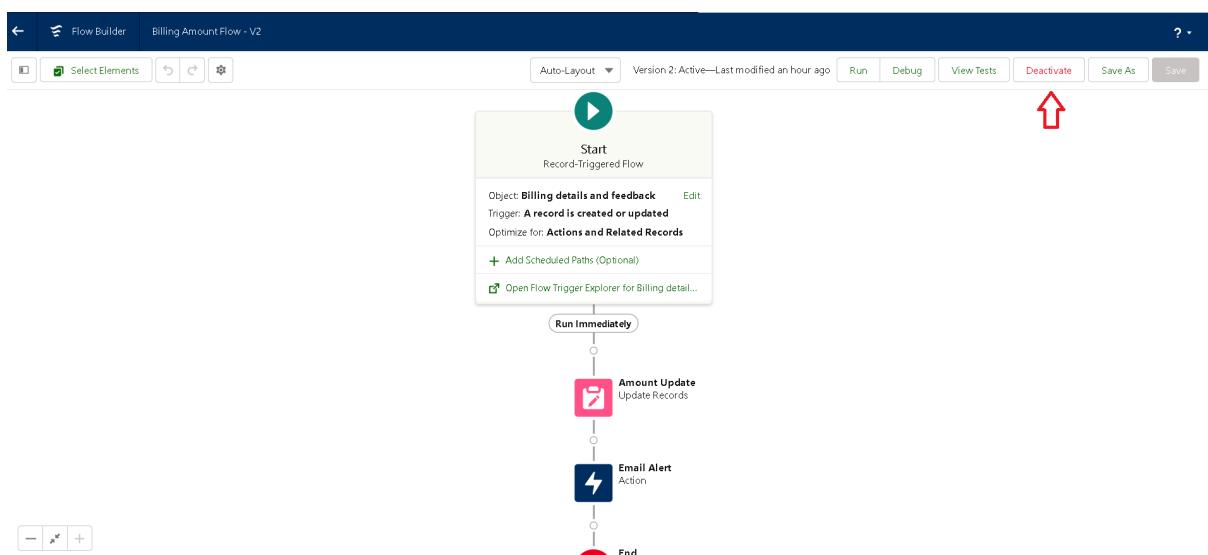

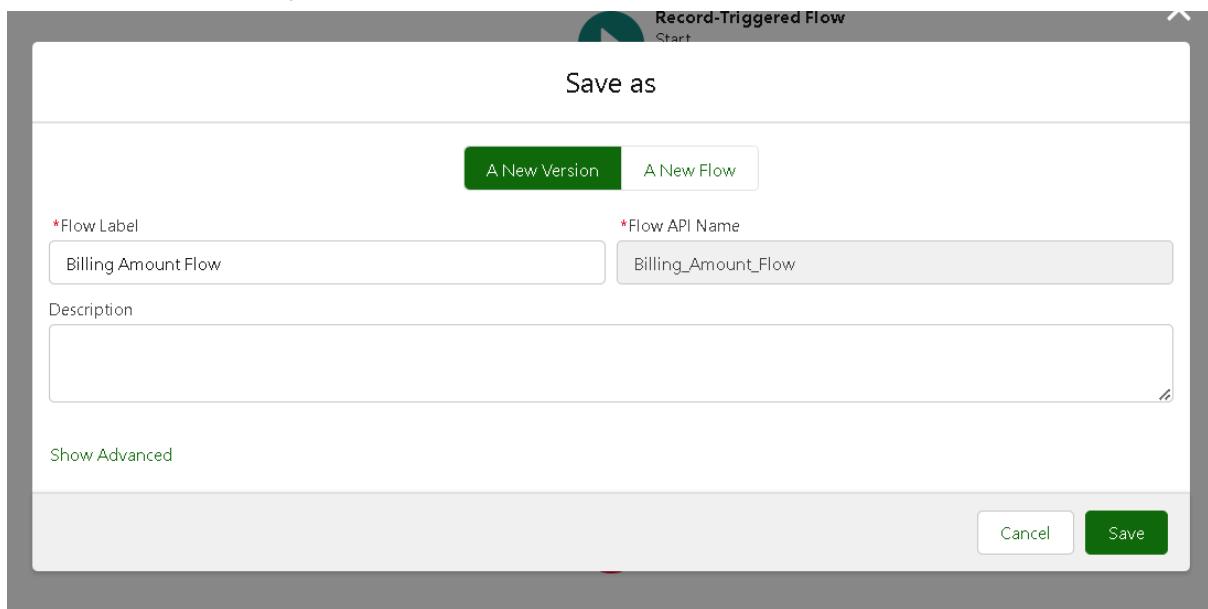

Edit Action

A_a Recipient Address List	<input checked="" type="checkbox"/> Include
{!\$Record.Service_records__r.Appointment__r.Cus}	
A_a Recipient ID	<input type="checkbox"/> Don't Include
A_a Related Record ID	<input type="checkbox"/> Don't Include
A_a Rich-Text-Formatted Body	<input type="checkbox"/> Don't Include
A_a Sender Email Address	<input type="checkbox"/> Don't Include
A_a Sender Type	<input type="checkbox"/> Don't Include
A_a Subject	<input checked="" type="checkbox"/> Include
Thank You for Your Payment - Garage Manageme	

Cancel Done

34. Click on save. Give the Flow label , Flow Api name will be autopopulated.

35. And click save, and click on activate.

Activity 2: Create another Flow

36. Go to setup → type Flow in quick find box → Click on the Flow and Select the New Flow.

The screenshot shows the Salesforce Flow builder interface. At the top, it says "Condition Requirements to Update Record" with a dropdown menu set to "All Conditions Are Met (AND)". Below this, the "Set Filter Conditions" section contains a single condition: "Field Quality_Check_Status_c Operator Equals Value True". A "Delete" icon is next to the value field. A "Add Condition" button is available. In the "Set Field Values for the Service record Record" section, there is one field set: "Service_Status_c" with a value of "Completed". A "Delete" icon is next to the value field. An "Add Field" button is available.

49. Click On Done.

50. Click on save

51. Given the Flow label as **Update Service Status** , Flow Api name will be auto populated.

52. And click save, and click on activate.

Milestone 14:Apex Trigger

Apex can be invoked by using triggers. Apex triggers enable you to perform custom actions before or after changes to Salesforce records, such as insertions, updates, or deletions.

A trigger is Apex code that executes before or after the following types of operations:

- insert
- update
- delete
- merge
- upsert
- undelete

For example, you can have a trigger run before an object's records are inserted into the database, after records have been deleted, or even after a record is restored from the Recycle Bin.

You can define triggers for top-level standard objects that support triggers, such as a Contact or an Account, some standard child objects, such as a CaseComment, and custom objects. To define a trigger, from the object management settings for the object whose triggers you want to access, go to Triggers.

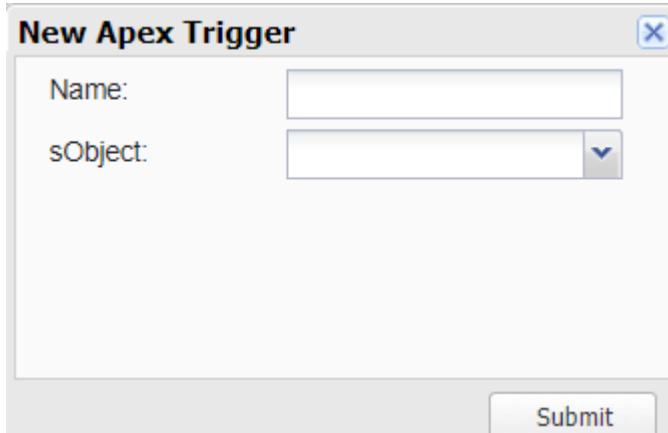

```
AmountDistribution.apxtx AmountDistributionHandler.apxc *
Code Coverage: None API Version: 58
12     }
13     else if(app.Maintenance_service__c == true && app.Replacement_Parts__c == true){
14         app.Service_Amount__c = 8000;
15     }
16     else if(app.Repairs__c == true && app.Replacement_Parts__c == true){
17         app.Service_Amount__c = 7000;
18     }
19     else if(app.Maintenance_service__c == true){
20         app.Service_Amount__c = 2000;
21     }
22     else if(app.Repairs__c == true){
23         app.Service_Amount__c = 3000;
24     }
25     else if(app.Replacement_Parts__c == true){
26         app.Service_Amount__c = 5000;
27     }
28
29 }
30 }
31 }
```

Code:

```
public class AmountDistributionHandler {

    public static void amountDist(list<Appointment__c> listApp){
        list<Service_records__c> serList = new list <Service_records__c>();

        for(Appointment__c app : listApp){
            if(app.Maintenance_service__c == true && app.Repairs__c == true &&
app.Replacement_Parts__c == true){
                app.Service_Amount__c = 10000;
            }
            else if(app.Maintenance_service__c == true && app.Repairs__c ==
true){
                app.Service_Amount__c = 5000;
            }
            else if(app.Maintenance_service__c == true &&
app.Replacement_Parts__c == true){
                app.Service_Amount__c = 8000;
            }
            else if(app.Repairs__c == true && app.Replacement_Parts__c == true){
```

Syntax For creating trigger :

The syntax for creating trigger is :

```
Trigger [trigger name] on [object name]( Before/After event)
{
}
```

In this project , trigger is called whenever the particular records sum exceed the threshold i.e minimum business requirement value. Then the code in the trigger will get executed.

1. Handler for the Appointment Object

```
1 trigger AmountDistribution on Appointment__c (before insert, before update) {
2
3     if(trigger.isbefore && trigger.isinsert || trigger.isupdate){
4         AmountDistributionHandler.amountDist(trigger.new);
5
6     }
7
8 }
```

Code:

```

trigger AmountDistribution on Appointment__c (before insert, before update) {

    if(trigger.isbefore && trigger.isinsert || trigger.isupdate){
        AmountDistributionHandler.amountDist(trigger.new);

    }

}

```

Milestone-15: User Adoption

Activity 1 : creating record

To create a record in the follow objects follow these steps

1. Click on the app launcher located at the left side of the screen.
2. Search for “ Garage Management” and click on it.
3. Click on the “ Consumer details tab”.
4. Click on new and fill the details as shown below figs, and click save.

New Customer Detail

* = Required Information

Information

* Customer Name	Mac	Owner	Annapurna SmartBridge
Phone number	5678765567		
Gmail	mac@gmail.com		

Services

Cancel Save & New Save

Now, Create the Appointment Record

1. Click on the “Appointment tab”.
2. Enter the customer details as created, while entering **Appointment Date** enter the date less than the created date.
3. Match the validation while entering the **vehicle number plate**.
4. Select the services you need.
5. Click on save to see the **Service Amount**.

The screenshot shows the Garage Management System interface. The top navigation bar includes links for Customer Details, Appointments, Service records, Billing details and feedback, Reports, and Dashboards. The current page is 'Appointments'. The main content area displays an appointment record titled 'Appointment app-016'. The form fields include:

- Appointment Name:** app-016
- Customer Details:** Mac
- Appointment Date:** 13/11/2024
- Maintenance service:**
- Repairs:**
- Replacement Parts:**
- Service Amount:** (empty input field)
- *Vehicle number plate:** TS30EU0443

At the bottom, it shows 'Created By: Annapurna SmartBridge, 18/11/2024, 3:28 pm' and 'Last Modified By: Annapurna SmartBridge, 18/11/2024, 3:28 pm'. There are 'Cancel' and 'Save' buttons.

Now, Create a service Record

1. Click on the “Service record tab”.
2. Enter the Appointment, and started is selected as default.
3. Click on save.

The screenshot shows a 'New Service record' dialog. At the top right, it says '* = Required Information'. The 'Information' tab is active. The form fields include:

- Service Record Name:** app-016
- Owner:** Annapurna SmartBridge
- *Appointment:** app-016
- Quality Check Status:**
- Service Status:** Started

At the bottom, there are 'Cancel', 'Save & New', and 'Save' buttons.

4. Open the record and click on Quality check status as true.
5. Click on save.

Service Record Name
ser-010

Owner
 Annapurna SmartBridge

* Appointment
 app-016

Milestone 16 : Reports

Reports give you access to your Salesforce data. You can examine your Salesforce data in almost infinite combinations, display it in easy-to-understand formats, and share the resulting insights with others. Before building, reading, and sharing reports, review these reporting basics.

Types of Reports in Salesforce

1. Tabular
2. Summary
3. Matrix

**Note : Before creating report, create latest “10” records in every object.
Try to fill every field in each record for better experience.**

1. Go to the app → click on the reports tab
2. Click New Report.

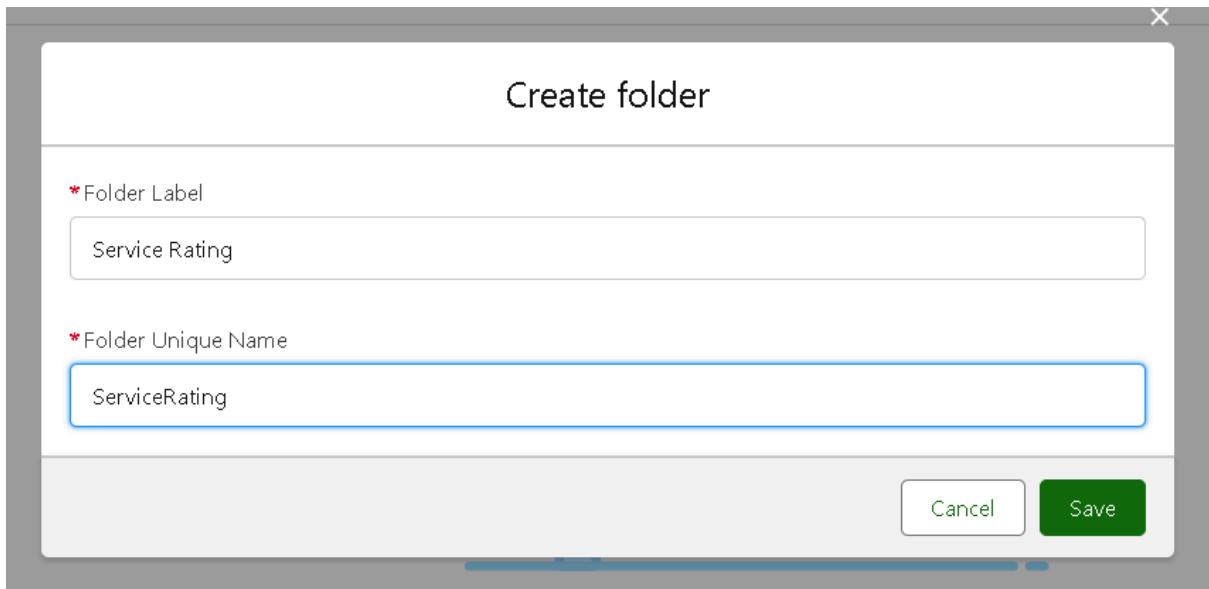

The screenshot shows the ServiceNow interface with the 'Employee Manage...' application selected. The top navigation bar includes 'Home', 'Employees', 'Assets', 'Asset Services', 'Projects', 'ProjectTasks', 'Reports' (which is highlighted with a red box), and 'Dashboards'. Below the navigation is a search bar and a 'New Report' button also highlighted with a red box. The main content area displays a table of recent reports, with columns for 'Report Name', 'Description', 'Folder', 'Created By', 'Created On', and 'Subscribed'. There are links for 'Recent', 'Created by Me', 'Private Reports', 'Public Reports', and 'All Reports' under 'REPORTS', and 'Folders' under 'FOLDERS'.

3. Select the Category as other reports, search for Service Information, select that report, click on it. And click on start report.

The screenshot shows the 'Create Report' dialog. On the left is a sidebar with categories like Customer Support Reports, Leads, Campaigns, Activities, Contracts and Orders, Price Books, Products and Assets, Administrative Reports, File and Content Reports, Individuals, Other Reports (which is selected and highlighted with a green box), and Hidden Report Types. The main area shows a list of report types with columns for 'Report Type Name' and 'Category'. One item, 'Service information', is selected and highlighted with a green box. To the right is a 'Details' pane for 'Service information', which includes sections for 'Service information' (Custom Report Type), 'Description' (Service information), 'Created By You' (No Reports Yet), and 'Created By Others' (No Reports Yet). A green arrow points from the 'Service information' in the list to the 'Service information' in the details pane, and another green arrow points to the 'Start Report' button.

4. Their outline pane is opened already, select the fields that are mentioned below in the column section.
 - a. Customer name
 - b. Appointment Date
 - c. Service Status
 - d. Payment paid
5. Remove the unnecessary fields.
6. Select the fields that mentioned below in GROUP ROWS section.
 - a. Rating for Service
7. Select the fields that mentioned below in GROUP ROWS section.
 - a. Payment Status
8. Click on Add Chart , Select the Line Chart.
9. Click on save, Give the report Name : New Service information Report
10. Report unique Name is auto populated.
11. Select the folder the created and Click on save.

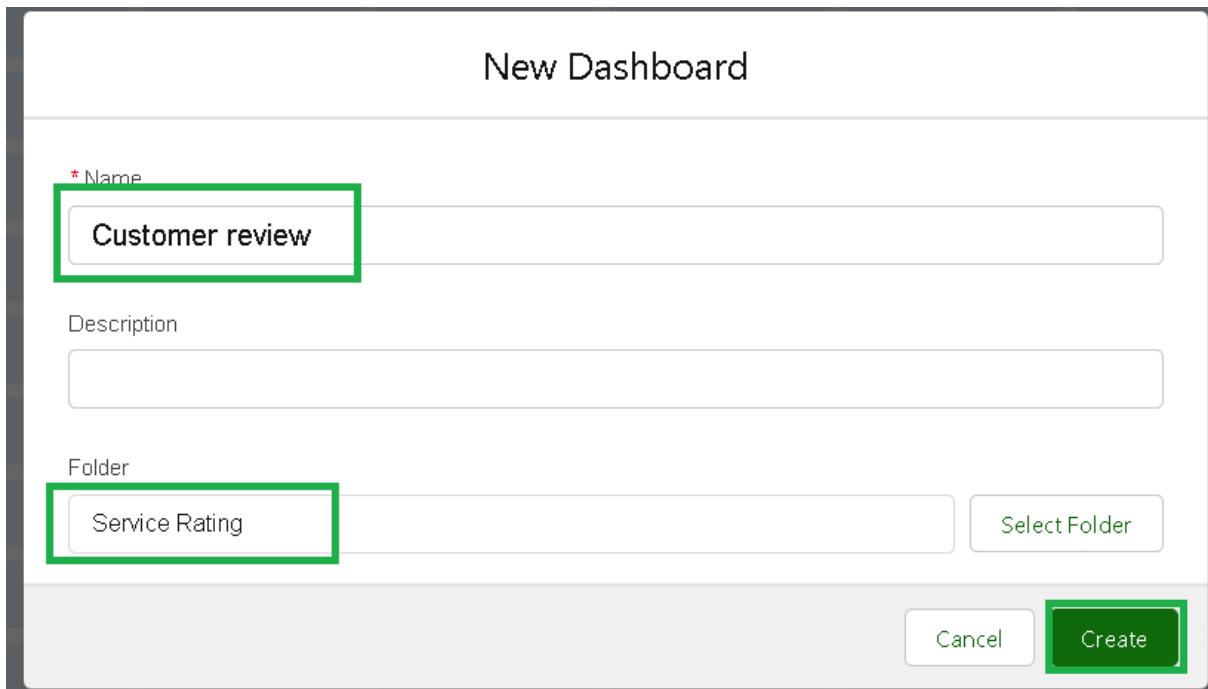

2. Click on dashboard tab.
3. Click new folder, give the folder label as “ Service Rating dashboard”.
4. Folder unique name will be auto populated.
5. Click save.

6. Follow the same steps, from milestone 15, and activity 2, and provide the sharing settings for the folder that just created.

Activity 2: Create Dashboard

1. Go to the app → click on the Dashboards tabs.
2. Give a Name and select the folder that created, and click on create.

3. Select add component.

Edit Subscription

Schedule dashboard refreshes and subscribe to receive results.
